What's on the Agenda?

01

Client Discovery

Overview and introduction

02

Business Pain Points

Discussion of issues and problem areas

03

Solution Gathering and Methodology

Using data from #2, develop robust solutions

04

Ongoing Support + Managed Services

After sales support is important, select the best options for your organization

THE KEY

Has been a symbol of reserved
and privileged access...

WHO WE ARE

In short...

Secured Legal Data LLC is a security focused IT Consulting firm dedicated to securing small business data and networked infrastructure from intrusion and disaster management.

ZERO TRUST

Zero Trust is a network defensive shift toward a more comprehensive IT security architecture that allows enterprises to restrict access restrictions to networks, applications, and the environment without sacrificing performance or the user experience.

Our Services

Here's a popular list of top services

Business Analysis

Identify work flows and processes. Summarize current state and suggest future state.

Network Hardening

Identify network bottlenecks and vulnerability points. Implement robust solutions.

Systems Hardening

Infrastructure analysis of all access to resources. Harden all access points with zero access security policies.

Infrastructure Upgrade

Build and deploy Servers, Desktops and Networking equipment as required.

Data Security

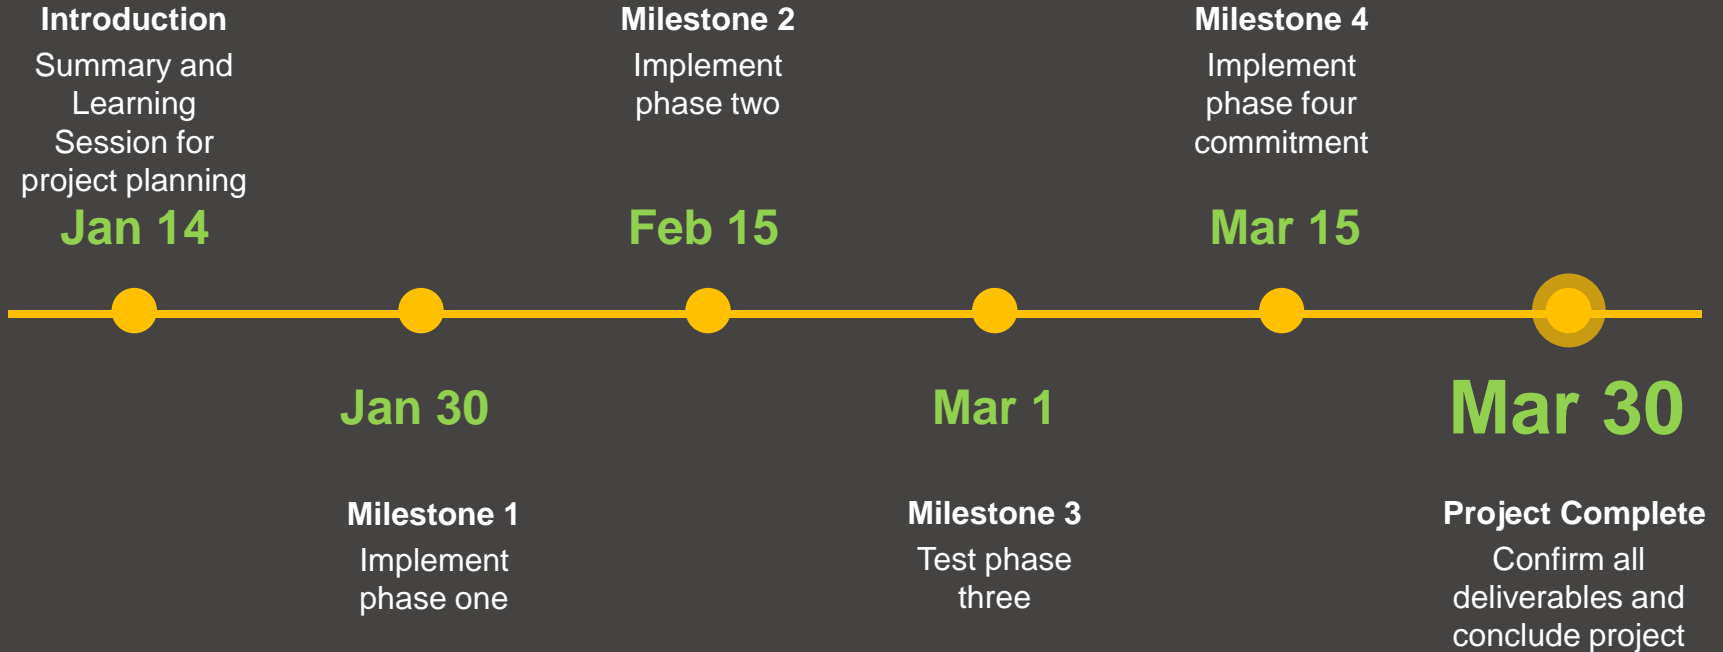

Ensure Data Redundancy, Archiving and Secure All Backups and Data Points.

Remote Support

On-Call remote support for all your business and emergency IT support requirements.

Sample Project Timeline

A visual framework of time estimation and planning

Ease of Access

No limit to privileged access

Local Access

Unlimited local access.

Remote Access

While you're on vacation.

International Access

From other countries.

Law Firm

Case Study

A small law firm uses google drive as their primary tool to sync and collaborate work between employees.

Google drive begins to error out because of a syncing issue. A machine was shutdown before google drive completed it's sync process on a single file. Soon the issue causes delays and loss of capital.

We were called to assess the issues and create a solution.

We built a small server, locked down network access and setup each machine on it's own workgroup. Data is now available even when the internet goes down.

Chiropractor

Case Study

With all data locked by a ransomware malware, we got a call from a Chiropractor office. All in a panic, seeking assistance with remediation strategies and data recovery.

We visited the site and assessed the damage.

No data was backed up, and their local IT company admitted they did not setup the servers nor network properly to restore from anything.

We were able to do data recovery on the server drive and get back all the needed current data, not requiring payment to the ransomware thieves.

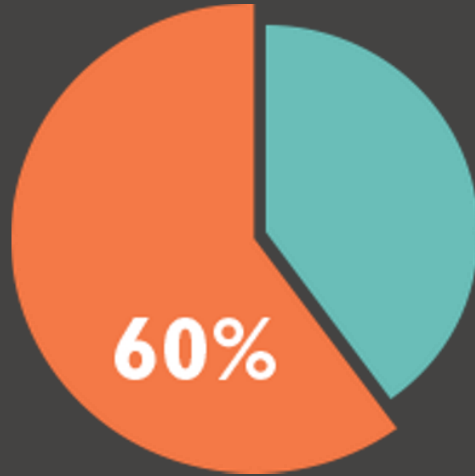

Worth the investment?

When Security Works, Your Investment Is Realized!

60%

According to [Cybercrime Magazine](#) –

“More than half of all cyberattacks are committed against small-to-midsized businesses (SMBs), and 60 percent of them go out of business within six months of falling victim to a data breach or hack.”

According to [CNBC](#) -

“hackers targeted small businesses 43% of the time, which might be due to the fact that only 14% were prepared to defend themselves.”

Different reports have rendered different estimates on the cost of these infiltrations, but none are cheap.”
